

PRIMARY HEALTH CARE

PUSKESMAS I DENPASAR SELATAN

Puskesmas (Indonesian: *PusatKesehatanMasyarakat*, English: *Public Health Centre*) are government-mandated community health clinics located across Indonesia. Puskesmas 1 Denpasar Selatan is one of the health centers in the city of Denpasar which is located on the number 8 Gurita Street, Ssetan village. Puskesmas I Denpasar Selatan has been established since 1979. At present the Puskesmas I Denpasar Selatan encompasses three villages namely Ssetan, Panjer and Sidakarya Village with population coverage of 131,087 peoples until 2018. Puskesmas I Denpasar Selatan have 2 main program. First is UKM or Public health efforts consists of health promotion, elderly services, children services (immunization for elementary school), mental health services, dengue fever controlled by cadre, mobile VCT for HIV/AIDS, enviromental health checked, screening for elementary senior high school (outdoor services). Second is UKP or Individual health efforts which include all of of our health treatment in build. The services are emergency room, general services, elderly inbuild treatment, dental and oral health, mother and baby care, family planning and contraception, sexually transmitted infection, immunization, pharmacy, laboratorium, nutrition counselling, adult counselling, health and traditional complementary. Puskesmas I Denpasar Selatan have some priority program, such as Rabies Centre, Health and traditional complementary, Health Service Priority Friendly For Kids, and Damakesmas.

Puskesmas I Denpasar Selatan is the one of Rabies Centre in Denpasar. The other one are in Public Hospital Wangaya (RSUD Wangaya) in Denpasar and also at Vertical Hospital in Bali (RSUP Sanglah). The establishment of this places becomes Rabies center in Denpasar with the issuance of a decree from the Health Department of Denpasar number :443.34/3554/Dikes. Rabies cases are still widely

found in the community. The first prevention of rabies is washing the wound with detergent for 15 minutes. Then , immediatly go to nearest health facility to get treatment. At Public Health Centre or Hospital, the vaccine of rabies will be given.

Health and traditional complementary in Puskesmas I Denpasar Selatan consist 'of: Counseling (in build services), Public Health services and counselling ('out'door) :Elderly services , Traditional Complementary for family have 2 kind of services, inbuild and outdoor services. Inbuild services such as

counselling, elderly servics, outdoor services such as eldery servics at Banjar, Health Promotion at Banjar, traditional complementary for family.

Puskesmas I Denpasar Selatan held Health Service Priority Friendly For Kids because the child can contact the disease suffered by his parents or patients in the waiting room, better if the waiting room for the child separated with the infectious patient.

Damkesmas program includes of Daily Emergency Management System (SPGDTS) and Community Health Care Program (Perkesmas). The community can immediately receive emergency services from the Damkesmas Team before being referred to the hospital .
